The Midterm and Preliminary Research

Understand the project.
Explore its data and plan your test.

45 minutes: project explanation and questions.
50 minutes: Colab research and writing.
5 minutes: save and submit.

The midterm project

Check the supplied database.
Show a rollback and a commit.
Explain the Week 5 blocking example.
Test one improvement.
Plan recovery after Week 8.

Individual project. 30% of the course grade. The assignment contains the 100-point rubric.

The supplied starter

Use the three-table Metro Support setup. Check 8 users, 12 tickets, and 21 events. Add the requester join and your commit example. Run one index comparison and record what you observe.

The SQL starter is for your practice database. Today’s Colab uses embedded CSV data.

Today’s notebook and the midterm

Today: your Colab copy's sharing link
Data observations and 180–250 words of research.

Final midterm: midterm.sql and README.md
Completed PostgreSQL work and explanations.

Reuse today’s writing in the README after testing your predictions.

Today: share your Colab copy and submit its link. No file upload.

The preliminary research lab

Inspect the data in Colab.
Read two short documentation sections.
Explain one test you plan to run.

Connect your observations to the sources. Label your expected result as a prediction.
